

OBJECTIVE

ASHISH SINGH

Android Engineer | Mobile Platform Architect| Android Systems for 100M+ Users | Performance & Scalability

HTTPS://GITHUB.COM/ASHISHSINGH009/ EXPERIENCE (14 YEARS)

Email: aashish2k2@gmail.com Mobile: +91-9582649335

Senior Software Engineer with 14 years of experience building, debugging, and optimizing large-scale Android systems used by millions of users. Strong background in diagnosing complex production failures, performance and memory optimization, and test-driven development. Known for hypothesis-driven problem solving, systems thinking, and rapid learning. Actively transitioning toward AI research through self-directed study and experimentation.

SKILLS

-
- KOTLIN, COMPOSE.
 - Koog /Google ADK Agents
 - FLOW, COROUTINES
 - MVVM, MVP.
 - AGILE, SCRUM.
 - TDD
 - JUNIT, ESPRESSO.
 - ANDROID JETPACK.
 - PERFORMANCE OPTIMIZATION.
 - REPORTING AND DOCUMENTATION.

VERIZON CLOUD:

[Play store link](#)

OBJECTIVE:

VERIZON CLOUD GIVES YOU SPACE FOR YOUR DIGITAL WORLD, SO YOU CAN EASILY BACKUP AND ACCESS YOUR PHOTOS, VIDEOS AND DOCUMENTS SECURELY AND PRIVATELY. KEEP YOUR CONTENT HANDY ON YOUR MOBILE DEVICES AND ACCESS IT WHEN YOU NEED IT FROM YOUR SMARTPHONE/TABLET AND COMPUTER.

MY ROLE:

- Architected High-Level Design (HLD) for core cloud synchronization modules, defining data contracts and sync logic that currently supports 100M+ users with 99.9% uptime.
- Self-Directed Research: Actively transitioning into AI Research with a focus on Large Language Models (LLMs) and autonomous agents.
- • Agentic Frameworks: Developing and experimenting with Agentic Workflows to automate complex multi-step reasoning tasks.
- Redesigned legacy subsystems to modernize the codebase, resulting in a [70] % reduction in technical debt and a measurable decrease in ANRs (Application Not Responding) errors.
- Partnered with key stakeholders to define technical roadmaps and execution strategies, successfully translating complex business requirements into deliverable engineering milestones.
- CREATE MOVIES AND CUSTOMIZE PHOTOS WITH FILTERS AND FUN STICKERS TO SHARE.
- Optimized critical performance paths, utilizing deep knowledge of Android internals to resolve complex memory leaks and concurrency issues in a large-scale production environment.

WORK EXPERIENCE:

- Senior Software Engineer III — Synchronoss Technology (2020–Present)
- Senior Consultant — Xebia IT Architect India (2019–2020)
- Android Team Lead — Wipro (2018–2019)
- Senior Software Engineer — Source Soft Solutions (2017–2018)
- Senior Software Engineer — Prospus Consulting (2015–2017)
- Software Engineer — Xantatech Pvt Ltd (2012–2015)

Key Result Areas:

- Architecture Authority: Owner of app layout design and database schemas; responsible for selecting the tech stack and enforcing architectural patterns (MVVM/MVI) across the team.
- Operational Excellence: Established automated alerting and performance monitoring pipelines to detect and resolve ANRs and memory spikes before they impact users.
- AI & Emerging Tech: Actively researching and prototyping with Machine Learning fundamentals and Multi-Agent Systems (using Google Agent Development Kit and JetBrains tools) to integrate AI capabilities into mobile ecosystems.
- Performance Engineering: Architect proactive monitoring systems, configuring automated checks for memory leaks and app optimization to ensure high stability and performance.
