

ASHISH SINGH

Staff Mobile / Client Engineer | Kotlin Multiplatform | Android | Compose | Streaming & AI Applications

Bengaluru, India · +91-9582649335 · sync.ashishsingh@outlook.com · github.com/ashishsingh009

SUMMARY

Senior mobile-platform engineer with 14 years of experience building, debugging, and optimizing production Android systems used by more than 100 million users. Strong in Kotlin, Kotlin Multiplatform, Compose, coroutines, Flow, Android architecture, performance engineering, and technical ownership. Architected high-availability cloud-synchronization capabilities, reduced application-not-responding errors by 70%, and led modernization of legacy subsystems. Also researching LLMs and agentic workflows through hands-on prototypes, with an interest in reliable AI client experiences.

CORE SKILLS

Mobile & Client: Kotlin, Android, Jetpack Compose, Kotlin Multiplatform (KMP), MVVM, MVI, Android Jetpack

Concurrency & Data: Coroutines, Flow, synchronization logic, data contracts, database schema design

Reliability & Performance: Memory-leak diagnosis, concurrency debugging, ANR reduction, performance monitoring, alerting, scalability

AI Exploration: Large language models, multi-agent systems, Google Agent Development Kit, JetBrains AI tools

Engineering: JUnit, Espresso, TDD, Agile, Scrum, technical roadmaps, architecture documentation

PROFESSIONAL EXPERIENCE

Senior Software Engineer III | Synchronoss Technology

2020–Present

- Architected high-level design for core cloud-synchronization modules, defining data contracts and synchronization logic for a platform supporting 100M+ users with 99.9% uptime.
- Owned application layout design, database schemas, technology selection, and architectural-pattern adoption, including MVVM/MVI practices in a Kotlin Multiplatform codebase.
- Established automated alerting and performance-monitoring pipelines to detect ANRs and memory spikes before they affected users.
- Redesigned legacy subsystems, reducing technical debt by approximately 70% and materially decreasing Android ANR errors.
- Diagnosed complex memory leaks and concurrency issues using Android internals and optimized critical production performance paths.
- Partnered with stakeholders to translate business requirements into technical roadmaps, architecture decisions, and deliverable engineering milestones.
- Conducted self-directed research and prototyping in LLMs, multi-agent systems, and agentic workflows to explore AI capabilities for mobile ecosystems.

Senior Consultant | Xebia IT Architects India

2019–2020

- Provided senior engineering and architecture guidance for Android/mobile-platform initiatives, aligning implementation choices with delivery and maintainability goals.

Android Team Lead | Wipro

2018–2019

- Led Android engineering delivery and supported team-level technical decisions, code quality, and execution across mobile product work.

Senior Software Engineer | Source Soft Solutions

2017–2018

- Built and maintained Android software while contributing to architecture, debugging, and production-quality delivery.

PROFESSIONAL EXPERIENCE (CONTINUED)

Senior Software Engineer | Prospus Consulting

2015–2017

- Delivered Android engineering work across application features, defect resolution, and maintainable implementation practices.

Software Engineer | Xantatech Pvt Ltd

2012–2015

- Developed Android applications and established the foundation for a career in mobile systems engineering.

SELECTED IMPACT FOR SARVAM

- Scale and ownership: production systems serving 100M+ users, with direct responsibility for architecture, data contracts, synchronization behavior, and reliability.
- Kotlin/KMP foundation: hands-on Kotlin, Compose, Flow, coroutines, and KMP architecture, including decisions around application structure and shared patterns.
- Reliability under pressure: automated monitoring, memory/concurrency diagnosis, and a 70% reduction in ANRs through legacy-system modernization.
- AI-client adjacency: practical LLM and agentic-system experimentation that can support collaboration with model-serving and product teams.
- Staff-level operating style: technical roadmap ownership, stakeholder partnership, documentation, problem solving, and raising engineering standards through architecture and mentoring.

EDUCATION & ADDITIONAL

14 years of professional software engineering experience. Bengaluru-based and available for on-site collaboration. Portfolio:
